Bug in use case <006> <Searching for activities that contain a single key word in their title or descriptions and are organised on a given day at a given time>

Description

The injected bug is that in the English view, the searcher's fields are described in Spanish.

Results

This bug was found.

Bug in use case <007> <Editing personal data>

Description

The injected bug is that the fields 'surname' and 'city' appear as password fields, instead of regular text fields.

Results

This bug was not found in the first testing because in the first place we tried to empty all the fields of the edition data and click the save button, and we stopped of testing when we noticed that the validator fields do not shown.

Bug in use case <010> <Listing and searching trainers by a single key word that must be contained in their names or surnames>

Description

The injected bug consists on the complete lack of a search bar, so there's no search function.

Results

This bug was found.

Bug in use case <012> <Joining or leaving a gym>

Description

The injected bug is that there's only a Leave option, but not a Join option.

Results

This bug was found.

Bug in use case <017> <Writing annotations>

Description

The injected bug is that the message's maximum rating is higher than 3, which should be the real maximum.

Results

At the first test we didn't notice this intentional bug because our group didn't make the level B of this project and in the document of the project test doesn't mention anything about which was the real rating.
